

INTERSCALAR COSMOLOGY

THE ORIGIN OF LIFE

III. Interscalar Science for Life Seminar
Rome 28. – 29. October 2017

New Cosmology with Hartmut Müller

*What is the origin of life in the galaxy?
What are the scales of cosmic consciousness?
What is the cosmic chronometer of events?
What are Heisenberg effects in cosmic scales?*

*How does hyperspace communication work?
Does non-biological life exist on Earth?
How many dimensions have space and time?
What is the fundamental fractal of space-time?*

*What is the most powerful force in the universe?
How to access the hyperspace of scales to explore the galaxy?
What are the metronomes of life in the universe?
What is the sound of the melody of creation?*

*How many universes coexist and how do they communicate?
How many light horizons does the universe have?
Where is the center of the universe?
Does our universe have a genetic code?*

*How does interscalar science work for peace?
Why is the paradigm change so important today?
Is Global Scaling the lost ancient sacred knowledge?*

INTERSCALAR COSMOLOGY - THE ORIGIN OF LIFE

III. Interscalar Science for Life Seminar Rome 28. – 29. October 2017

In the eternal city of Rome on October 28th - 29th we continue the series of “Interscalar Science of Life” seminars which started in Austria (2015 Bregenz and Graz).

Interscalar cosmology and the origin of life are the key words that will guide us to a new understanding of life as a cosmic phenomenon.

The interscalar view of the world could be the new scientific paradigm that will show the complex connection of processes at very different scales in the universe explaining mathematically how subatomic and galactic scales are directly related to biological life.

The interscalar view of life and the interscalar concept of ethics are essential for the survival of humanity. This change of the paradigm in science is therefore very important for our future. We need to change our vision of the world, to reach a new understanding of life in order to realize the importance of life in the universe.

Only when our children can develop interscalar consciousness and learn to respect life in all scales and when this vision is supported at home, at school, in the cinema, in the supermarket and the internet, can ethical consciousness increase and will war cease to be an option for human relationships.

In this seminar we invite you to experience the spirit of exploration of the interscalar world where nobody has gone before.

Location: Leonardo da Vinci Rome Airport Hotel, www.romeairporthotel.it

Start: Saturday, October 28th, 9:30 a.m.

End: Sunday, October 29th, 2:00 p.m.

Contribution: 190.- Euro

Registration: www.beat-concept.com

Hartmut Müller, PhD, graduated in philosophy and natural sciences at the Saint Petersburg State University in Russia.

For his scientific research in the field of Global Scaling and his engagement for ethics in science he received the highest award of the "Vernadski Star" of the Russian Interacademic Society. He participated in soviet space research projects and cooperates with international frontier research groups.

In 2012 he was defamed and judged guilty for alleged participation in a case of fraud that wrongly was claimed to be connected with his research in the field of Global Scaling. This was the only chance to discredit him as a frontier scientist. After two years in jail he now continues his research and international commitment to ethics in science and engineering.

Dr. Leili Khosravi graduated in medicine and specialized in obstetrics and gynecology at the university of Rome. In 1998 she cofounded the “Medical Association Against Torture” which encompasses religious and non-religious groups supporting immigrants. In 2000 Leili Khosravi moved to the “Community of Living Ethics” in Umbria Italy where she teaches at the “Esoteric Healing School”. She is developing a holistic vision of the human being and working with persons who are interested in frontier sciences based on the principles of ethics in science and medicine. Leili Khosravi is also a cofounder of the school of naturopathy “Naturoloris” which offers a four-year postgraduate course.

Since 2011 Leili Khosravi collaborates with Hartmut Müller in research and education in the field of interscalar theory and practice.

Hartmut Müller and Leili Khosravi work as independent researchers, they are not part of any institutional organization.
